

Workspace Structure Analysis

This document provides a comprehensive mapping of the files in the codebase, detailing how pages and components are structured, where specific UI elements are located, and how they connect.

1. Application Entry & Routing

The application utilizes standard React entry points and routing via **react-router-dom** (configured with *HashRouter*):

- **Main Entry Point:** [src/main.jsx](#)
Imports global design rules (*index.css*) and mounts the main *App* component.
- **Routing Controller:** [src/App.jsx](#)
Imports and renders global layouts (Navbar, Footer, FloatingContact, MobileBottomNav, ScrollToTop) and maps URL paths to page components.

2. Shared Layout Components (Always Rendered)

These components are wrapped around every page to maintain layout consistency across the site:

Component File	Key Elements & UI Placements
Navbar.jsx	Top header bar, logo mark, page navigation links, mobile hamburger menu, WhatsApp CTA.
Footer.jsx	Bottom footer with brand bio, social links, quick links list, policies, contact info grid, back-to-top button.
FloatingContact.jsx	Dynamic fab expanding into WhatsApp and Direct Call contact methods upon scrolling down.
MobileBottomNav.jsx	Mobile-only persistent bottom navigation bar containing shortcuts for Home, Honeymoon, WhatsApp, and Call.
ScrollToTop.jsx	Logic helper resetting scroll coordinates to (0,0) upon route transitions.

3. Page Structure & Component Mapping

A. Home Page ([src/pages/Home.jsx](#))

Acts as an orchestrator component. It does not define inline UI; instead, it renders the following components in order:

- **Hero.jsx:** Main cover slider, search bars, trust badges, experience marquee.
- **HeritageValues.jsx:** Soul of Kerala Kathakali block & core brand guarantees.
- **Destinations.jsx:** Parallax grid cards (Munnar, Alleppey, Wayanad) and counter stats.

- **SignatureExperiences.jsx**: Horizontal scroll tray showcasing regional experiences.
- **TrendingPackages.jsx**: Grid showing trending packages with custom photo slideshows.
- **Testimonials.jsx**: Client testimonials, review stars, and press logo references.
- **JourneyCTA.jsx**: Visual banner with direct booking triggers.
- **SabarimalaSection.jsx**: Pilgrimage feature box pointing to sacred package details.
- **ExpertContact.jsx**: Contact block highlighting Rajesh Pillai (Senior Specialist).

B. Honeymoon Page ([src/pages/Honeymoon.jsx](#) / [Honeymoon.css](#))

Features a misty mountain hero visual, intro statistics layout, alternating magazine-style luxury package cards (Alleppey, Gavi, Munnar), and the 'Lachoos Way' values section.

C. Sabarimala Page ([src/pages/Sabarimala.jsx](#) / [Sabarimala.css](#))

Contains a premium auto-playing loop video header, sacred pilgrim services grid, a vertical step timeline flow, and a WhatsApp-connected inquiry form.

D. Fleet Page ([src/pages/Fleet.jsx](#) / [Fleet.css](#))

Renders premium sedan/SUV selectors, an inline travel duration availability filter, catalog displays for high-end vehicles, and a sidebar requesting custom quotes.

E. Contact Page ([src/pages/Contact.jsx](#) / [Contact.css](#))

Includes office badge details, immediate link action cards (Call, WhatsApp, Email, Maps), a multi-field trip request form, operation hours, and a Pathanamthitta Google Map embed.
